SUMMARY

Full stack developer and BCA student experienced in building and shipping complete web and mobile applications end-to-end, from frontend interfaces to backend systems and deployment. Comfortable working independently on freelance client projects, from requirements to a live, production-deployed product. Strong systems-level curiosity, self-directed learner, and effective at building efficiently even with resource-constrained hardware.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Kotlin

Frontend: React, React Native, Tailwind CSS, Framer Motion

Backend: Django, REST API design

Mobile: React Native, Jetpack Compose (Kotlin)

Tools & Platforms: Git, GitHub, Linux (Ubuntu/Mint), Cloudflare Pages, GitHub Pages, Google Colab

Other: Web Audio API, Google Sheets as a data backend, AI-assisted development workflows (LLM tooling, prompt engineering, RAG concepts with Ollama/ChromaDB/LangChain)

EXPERIENCE & PROJECTS

Freelance Full Stack Developer

Independent / Remote

- Booko – Institutional book management system built for a real client; designed and delivered a full data management workflow for institutional use. (Completed Mar 2026)
- Resulta – Frontend-only school exam results platform using Google Sheets as a live data source; deployed on Cloudflare Pages; first paid freelance client project. (Completed Mar 2026)

Independent Projects

- No Sleep – Android utility app (Kotlin, Jetpack Compose, Material 3) that keeps the screen on via a lightweight overlay flag instead of a battery-draining WakeLock, with a Quick Settings tile toggle and an automated CI/CD pipeline for signed release builds. (Completed Feb 2026) [GitHub](#)
- Quiz Maker – Single-file, client-side browser tool that turns a set of quiz questions (pasted in a defined format) into a shareable, narrated portrait video with typing animation, countdown, and synthesized audio — entirely in-browser, no server or build step. [Live](#) / [GitHub](#)
- Malayalam ToolKit – Browser-based Manglish-to-ML-TT Malayalam font converter for design software (Photoshop, Premiere, CorelDraw), with an on-screen keyboard and text analytics. [Live](#)
- Share File – Android app (in progress) that turns a phone into a local network file server with a web UI, built on raw Java sockets rather than a networking framework, with MediaStore integration, password protection, and QR-code authentication. [GitHub](#)

...and more ongoing experiments — full list on [GitHub](#).

EDUCATION

Bachelor of Computer Applications (BCA)

Sreenarayanaguru Open University – 3rd Year (as of July 2026)

Full Stack Development Course

Steyp – 3-year program, currently in 3rd Year (as of July 2026)

TRAINING

Two-Day Machine Learning Workshop – Sreenarayanaguru Open University – Covered the full pipeline from model building to deployment.
